

WHY MAINTAIN YOUR OVERHEAD DOORS?

Many organizations don't think about their door systems, but there are good reasons to do so ...

Overhead doors are designed to need routine maintenance. Without it, they become prone to failure.

Commercial doors are made with small, inexpensive components that wear, and need checking and replacement during a door system's normal lifecycle. Finding and fixing small problems, like frayed cables or worn rollers, before they become big problems, like a door that falls, is money well-spent.

To comply with safety law.

Although often overlooked, there **are** workplace safety requirements for commercial doors (see below), and improperly maintained or configured doors create increased safety compliance and liability exposure. Your overhead doors should always be included in your Safety Program.

Why choose us to maintain your doors?

We use **SafedoorPM**, a planned maintenance and safety compliance program designed specifically for commercial doors. We use the program to do a better job maintaining your door systems. Here's how:

- ▶ **The right PM work, at the right times.** Our service technicians are guided by SafedoorPM's powerful mobile app with its comprehensive knowledge-base of manufacturers' maintenance standards and practices. Your doors will receive the right PM work, to the right standards, at the right intervals.
- ▶ **Keep costs down.** SafedoorPM's mobile app enables technicians to work more productively by giving them all the information they need at their fingertips, convenient ways to input notes and photos, door PM history, and more.
- ▶ **Safety compliance.** SafedoorPM specifically addresses safety devices and accessories, and is designed to meet *Occupational Health & Safety* standards, reduce safety liability, and fit easily into your Safety Program.
- ▶ **Comprehensive, no-hassle record-keeping.** All of your PM records are securely stored in SafedoorPM's cloud-based Customer Portal, where you can access them 24/7.

During a SafedoorPM, we will **inspect, check, lubricate, tighten, balance, and test your doors, operators and safety accessories**. All mechanical and structural elements, settings, and controls will be assessed and graded. We'll pay special attention to safety devices to ensure your doors are correctly configured, and that **all safety devices are functioning properly**.

We'll provide you with **detailed inspection records** that clearly identify any corrective work needed to address critical safety hazards or operational problems. Any corrective service work will proceed only with your authorization. Quotations and estimates are provided.

To ensure your doors remain properly cared for, we'll **recommend an ongoing PM schedule**, keep track of the PM calendar, and contact you as the next PM interval approaches.

All of your **PM records will be securely stored** on SafedoorPM's cloud-based Customer Portal, where you can access them 24/7.

B.C OHS Standards

All B.C. employers have a legal responsibility for safety in their workplace. For overhead door systems, that responsibility is defined by:

- **Section 4.3(2)(a) Safe machinery and equipment** of the Regulations which requires all workplace equipment to be installed, inspected and maintained in accordance with the manufacturer's instructions
- **Section 4.1 Safe workplace** of the Regulations which requires the workplace to be maintained to protect people from danger
- **Workers Compensation Act, Part 3 Occupational Health and Safety, Division 3 S115(1) General duties of employers** where "Every employer must ensure the health and safety of all workers working for that employer ..."
